EDUCATION

Freie Universität Berlin

Oct. 2022 - Feb. 2026

M.Sc. Bioinformatics

Coursework:

Machine Learning

Applications in life sciences

University of California, Los Angeles

Sept. 2017 - June 2020

B.Sc. Chemical Engineering

Minor in Bioinformatics

Coursework:

C++, MATLAB, Algorithms in

Bioinformatics (Python)

LANGUAGES

German - B2

English - Fluent

Indonesian - Native

HOBBIES

Learn music (sing, guitar)

Volunteering (soup kitchen)

Cafe hopping

Hiking

Picnics & Potlucks

Board/online games

EXPERIENCE

Research Assistant - Fraunhofer FOKUS

Mar. 2023 – Jan. 2026

Full-stack developer across multiple e-learning research and industry projects.

- **EXPAND+ER WB3**: Built **frontend and backend** components including **user authentication**, content filtering, and an **Open Badge validation service** in a **RESTful microservices** architecture.
- **KoApp**: Built an interactive learning analytics dashboard with **LTI 1.1 authentication**, **xAPI aggregation**, and **client-side caching** for real-time skill indicators and auto-retry in low-bandwidth environments.
- **CLM Desktop Application**: Implemented **frontend** features with **LTI auth**, **xAPI tracking**, and a feedback component within an **LLM chatbot** interface.
- **Goethe-Institut**: Built **analytics dashboards**, **backend services** to deep-copy existing content, a metadata repository for question schemas, and a **Moodle plugin (PHP)** for user and course data sync.
- **FWU eduCheck Digital**: Developed **automated testing workflows** using **Appium**, **Playwright**, and **Selenium**.

Tech stack: JavaScript/TypeScript, Node.js, Next.js, React, Express.js, Docker, Git, SQL/noSQL, PHP, Playwright, PostgreSQL, MongoDB

Liver Cancer Analysis [PROJECT]

April – June 2023

Replicated Chaudhary et al.'s methodology, training classifiers on multi-omics data to predict patient survivability.

- Performed **data preprocessing** and applied **Logistic Regression** for feature reduction across multiple omics datasets, including model parameter tuning.
- Trained and evaluated **SVM and Gradient Boost** classifiers, analysed ROC curves, and identified key predictive features.

Tech stack: Python, Scikit Learn, Pandas, Numpy, R

Drosophila Brain Registration for Individuality [THESIS]

Oct. 2024 - Oct. 2025

Developed a full preprocessing and registration pipeline for **3D confocal brain image** stacks to **analyze morphological variation** within and between individuals.

- Identified and implemented effective **noise-reduction** and **intensity-adjustment** preprocessing techniques.
- Adapted preprocessing steps to remove the lamina when present and separation of the central brain (CB) and optic lobes (OL) by **training a Deep Learning model** (NNUnet) for improved registration accuracy.
- Designed a modified **registration workflow** that avoids shape and size alterations and applied inverse-registration parameters to enable accurate brain parcellation.

Tech Stack: Python, NNUnet, Amira, ANTsPy, WSL, CMTK, Fiji, Pandas, Numpy, SimpleITK
